Office Action Summary

Art Unit: 1617

Applicant's election with traverse of Group I, silicified microcrystalline in Paper No. 6 is acknowledged. The traversal is on the ground(s) that no undue burden. This is not found persuasive because burden has been shown by the different classifications of the groups.

The requirement is still deemed proper and is therefore made FINAL.

The election of species requirements are withdrawn.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6,8-12,23-27,29-31 are rejected under 35 U.S.C. 102(b) as being anticipated by DeCrosta et al.

DeCrosta et al teach a tablet comprising an acrylic polymer and lubricants (abstract). Carbopols are disclosed (column 5, lines 22-53). Auxiliary hydrocolloids, including mixtures of cellulose ethers and cellulose alkylhydroxylates are specified (column 5 lines 1-19). Talc and magnesium stearate are specified (column 5, lines 55-56). Lactose is disclosed (column 6 line 4). Actives such as procainamide are disclosed (column 4 lines 29-30).

Claims 7,28 are rejected under 35 U.S.C. 103(a) as being unpatentable over DeCrosta et al as applied to claims 1-6,8-12,23-27,29-31 above, and further in view of Tsujino.

Tsujino et al teach cellulose esters as enteric coats (abstract). Tablets are specified (column 3, line 1).

Art Unit: 1617

It would have been obvious to one of ordinary skill to coat the DeCrosta et al tablet with a cellulose ester to achieve the beneficial effect of an enteric coat in view of Tsujino.

No claims allowed.
